Optimize The Value of Your New System

Keena is an industry leader in performing thorough and efficient data conversions. We work closely with the key stakeholders in your organization to make sure your EHR conversion and data migration project is a success, so your team can focus on continuing to deliver excellent patient care without disruption.

Our Conversions By the Numbers:

400

Large and small data
extraction and conversion
projects.

15+

Assisted Health
Organizations with
conversions to Epic EHR.

40+

Leading EHR and
PM vendors/systems
converted to date.

A Proven Process

Our conversion solutions team works with all of your existing patient data to convert, migrate, and then provide easy access to current and archived patient information. We leverage advanced technology, maintain strong relationships with leading EHR/PM vendors, and utilize our extensive conversion library to get your new systems online quickly, accurately, and with minimal expense. Over the years we have performed hundreds of conversion on most every EHR platform, and our time-tested approach guarantees the best result for your new EHR and your practice.

Eliminate Duplicate Patient Records Before Conversion

Problems associated with duplicate patient records is an on-going challenge, especially during conversions. Prior to your data migration we quickly assess how big your duplication count problem actually is for your organization. Then we employ a sophisticated merge patient cleanup process. And, since the duplicate patient challenge never goes away we can serve as your on-going duplicate patient management solution.

Patient Data Archival

LiveArchive provides access to all archived healthcare records in an integrated suite of healthcare archival applications. Providers and staff use LiveArchive to access and interact with legacy clinical and financial information through interactive dashboards.

LiveArchive Clinical archives clinical data from one or multiple Electronic Health Record systems into a single data warehouse. The LiveArchive database provides storage, display, and reporting capabilities for discrete data such as population health, meaningful use, compliance and MSSP reporting. Easily search and retrieve archived documents for reference, compliance and release of records.

LiveArchive Financial moves your legacy financial data to LiveArchive and allows you to continue invoicing and managing collections from your financial archive.

Release of Records

StaticArchive is an excellent way to archive an EHR for reference, compliance and release of records. All records from your EHR are converted into static PDF files and are searchable within the StaticArchive database and can easily be output upon request.
